SWAN HARP

The little harp that a swan fell in love with.

The instrument I create has a beautiful story.

One morning, shortly after I began making harps, I was playing a prototype by a small quiet pond. Though I was still a beginner and my playing was clumsy and uncertain, the clear, gentle notes rippled softly across the water.

A white swan glided toward me, drawn by the music. She came very close, listened intently, shivered her wings with delight, and even began to doze.

When I stopped playing, she looked up at me as if saying, “Please play more.”

It was a magical moment.

The heartwarming video of this encounter spread rapidly on YouTube and social media, reaching over 15 million views and touching hearts around the world.

This is the story behind the SWAN HARP.

I hope you enjoy its transparent, delicate, crystal-clear tone — like drops of sparkling water.
